

***OEIS National Registry:
What's Been Done?
What's Next?***

Bob Tahara MD FACS FSVS RVT RPVI

Director, Allegheny Vein & Vascular, Bradford PA

Adjunct Assistant Professor of Surgery, Department of Surgery/Division
Vascular Surgery, University of Pittsburgh School of Medicine

@7th OEIS Annual Meeting (Virtual) Orlando, FL
25 SEPT 2020

Disclosures

- Technical Director for OEIS National Registry
- Chair, OEIS National Registry Committee

Editorial Disclosures

Atypical talk for me: Does not involve vascular technical innovation, ultrasound, tibial access or limb salvage.

Brett Wiechmann Disclosures

- I do not do chin or butt lifts contrary to Bret's intro

Overview

- Background & current status of OEIS National Registry
- Current Reporting Dashboards
- Cardiac Module Development
 - outline and process
 - Anticipated timeline

What's Been Done?

- Vendor=> Syntactx, NYC
- Dr. Jeff Carr driving force for OEIS
- Early 2017- V1
- Spring of 2018 – V2
 - Changed the underlying data structure
 - Introduced new capabilities in analytics
 - Modified (I hesitate to say “improved”) the web based EDC

What's Been Done?

- November 2017- Lauren Jones MS added as Registry Manager
- April 2018 – Dr. Bob Tahara joins as Technical Director (AKA Lead Masochist)
- May 2018 became apparent basic architecture of the database/EDC including its structure(s) and relations needed significant overhaul
- May-November 2018 “6 months of hell”

WHISKY

What's Been Done?

- OEIS NR is a QCDR- Qualified Clinical Data Registry which allows us to support:
 - Reporting Quality Measures (QMs) for participating physicians/sites (based on NPI/TIN combination)
 - Reporting Improvement Activities (IAs) for participating physicians/sites (based on NPI/TIN combination)
 - 2020 remains essentially same as 2019 MIPS score:
QMs 45% + IAs 15% = 60%

If you re-weight this may be up to 85%

What's Been Done?

- Publications
 - 1st peer reviewed paper from Registry published in JEVT this summer
 - 2nd paper (Safety and Efficacy) is being written as we speak
 - Research Committee in charge of publication strategy and map->we need **INVOLVED** volunteers

What's Been Done?

- November 2018-February 2018 technical formatting/validation/data transformation and finally the actual migration to the new V3 interface and data structure performed
- Now have all V1 and V2 data merged into the new format and EDC
- Analytics are now “in-house”
- QM query writing and analysis now “in-house”
- Actual reporting/transmittal is by Syntactx

Current Status

- Enhanced dashboards have been available over a year and are expanding
- Opportunities for clinical research and data mining from the Registry as a whole –and–
- Ability to do custom analytics for individual or aggregated sites on a per/hour added fee basis

OEIS National Registry Summary

THE DIRECTORS CUT
(THE GOOD, THE BAD AND THE UGLY)

Donald Watson

Mark Watt

Findlay Ross

What's Next?

- We need volunteers who are willing and able to assist with QM development
- Bringing the Cardiac Module online and into production
- Maintenance of our QCDR functions
- Further publications

What's Next?

- We need volunteers who are willing and able to assist with QM development
- Bringing the Cardiac Module online and into production
- Maintenance of our QCDR functions
- Further publications

What's Next-Cardiac Module?

- Cardiac Module Development
 - Coronary (Diagnostic and Interventions)
 - Rhythm Management/EP
 - (future possible- Structural Heart)
- “Bolt on” to current architecture but requires completely new data fields and variables to account for the above interventions
- Maintains Demographics, Clinical status, Access tabs in current web EDC

What's Next- Cardiac Module?

- Funding: grants have already been obtained and are under progress to completely fund
- Hiring an additional FTE employee to assist with development as well as continuing operations
- Selecting and empaneling cardiac experts to assist with data field and variable development
- Design and construction of new EDC webpages
- Design and construction of reporting dashboards

What's Next- Cardiac Module?

- Schedule is currently behind about 7 months from original timeline developed in 10/2019
 - Covid
 - Covid related industry delays
- Anticipate actual design and live meetings to settle data fields and variables will begin 11/2020
- Anticipate beta product by 3/2021
- Production product rollout depends on above

Summary

- Incredible development and improvement of PAD module from ground up over 2017-2018
- Robust data collection and analytics yielding results over 2019 and into 2020
- Publications are now real from this data
- Cardiac module is coming. (as is winter!)
